

INSTALLATION INSTRUCTIONS

- 1. Cut a 52mm (2 1/16") diameter hole in the panel. You will need a minimum clearance of 55mm (2 3/16") behind the panel to fit the gauge.
- 2. Remove fastening ring and insert gauge through panel from the front, fit and tighten fastening ring from the rear.
- 3. Connect wires according to wiring diagram.

Select either Orange or Yellow wires for backlighting. Wire colour corresponds with backlight colour.

- * Note the use of dropping resistors for 24V circuit.
- 4. Insert wire harness into port at the back of the gauge.
